

New display cases in three buildings on campus
Swan, Jeremy (NIH/NICHD) [C] posted on Mar 18, 2020

New display cases have been installed around campus. Read a comic book about [Joseph Goldberger's work in pellagra](#) in the early 20th century at the Building 1, 3rd floor case. Be amazed at the variety of Clinical Center patches near the Hospitality Desk on the 1st floor of the Clinical Center. Think about the social context of coloring books from the Clinical Center by its 2nd floor cafeteria. And salute a leading woman investigator, [Dr. Margaret Pittman](#), in the Building 60 lobby. Two cases are coming to the Vaccine Research Center, and one to Building 6.

[Remembering Dan Lednicer, Volunteer Extraordinaire
Lyons, Michele \(NIH/OD\) \[E\]](#) posted on Jan 08, 2021

Courtesy of the Lednicer Family

We celebrate the life, work, and friendship of Daniel Lednicer, Ph.D., who joined our office as a volunteer in 2006, and actively contributed to our mission until his death last week at the age of 91. He is greatly missed.

Never one to be idle, Dan came to the Office of NIH History and Stetten Museum after finishing a volunteer gig at the National Building Museum, where he had scanned and cataloged 8,000 photographs of the Kress Variety Store Collection. He was also volunteering at the Holocaust Museum, entering thousands of names into the Victims and Survivors Database. Over the past 15 years, Dan catalogued our library, identified museum objects, scanned hundreds of instrument manuals and photographs, and wrote biographies of prominent NIH scientists. We were about to ask him for his help to prepare oral histories of NIH staff working on the COVID-19 pandemic when he died.

We are sad to relay news of the passing of Herbert Tabor, M.D., the world's foremost authority on the enzymatic pathways of polyamines, as well as an esteemed editor of the Journal of Biological Chemistry for 40 years, and, until his death at age 101, a senior principal investigator in the NIDDK Laboratory of Biochemistry and Genetics, where he had served as lab chief until 1999.

Behind the Mask

COVID-19 has impacted the NIH community in many ways—from researching and providing information about the disease, to developing therapeutics and vaccines, to caring for patients in the Clinical Center, to re-configuring the ways we perform our jobs. To preserve this important time in NIH history, the Office of NIH History and Stetten Museum is seeking reflections, documents, photographs, and objects about how those at NIH have experienced the COVID-19 pandemic.
